

Question-Answer with Emma-Jane MacKinnon-Lee

What other tokens exist in the ecosystem? Is there a governance model?

We've engineered token contracts across a variety of ERC standards to support different functions within the ecosystem. The core is \$MONA (ERC20), but beyond that, there's a broader architecture: Genesis NFTs (ERC721), Fashion NFTs using ERC998 (composable), FGO (Fractional Garment Ownership) with ERC1155, PODE NFTs using ERC5114, plus additional ERC20s like DLTA and W3F.

In terms of governance, \$MONA, PODE, and Genesis tokens are all used in governance processes via Snapshot. That includes proposals around protocol upgrades, treasury use, and coordination mechanisms.
